                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2001-488783/53.

The invention relates to human novel polypeptides and their associated complynucleotides. The polypeptides and polynucleotides are useful in gene comply the treating, inhibiting or preventing neural disorders, immune comply for treating, inhibiting or preventing neural disorders, immune comply the disorders (e.g. systemic lupus exythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. cand multiple sclerosis), muscular disorders, respiratory diseases (e.g. cand multiple sclerosis), pulmonary disorders, reproductive disorders, completed disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left chart syndrome), renal disorders (e.g. acute kidney failure and end-stage crenal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and cappendicitis), allergic reactions and conditions (e.g. asthma), blood crelated disorders (e.g. thrombosis, atherosclerosis and myocardial cinfarction) and cancerous diseases. Sequences ABX73173-ABX74167 represent comply the disease of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was CC determined by the technique of SBH (sequencing by hybridisation). Also cincluded is a purified polypeptide comprising a sequence corresponding to CC a reading frame of the novel polynucleotide. The nucleic acid sequences CC are useful in diagnostics as expressed sequence tags (BST) for cidentifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations CC responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, CC for chromosome and gene mapping, in the recombinant production of CC protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data CC for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030073623

Additionally, (I) polymucleotides may be used to produce the secreted (I), by inserting the protein. (I) proteins and polymucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK34942 to AAK54950 and AAM82169

(I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For
                                                                                                                                                                                                                                                                                                                                    WO200214500-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated polynucleotide (ABN27253-ABN33262) with cytostatic activity. The polynucleotide is used to produce a polypeptide, to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and to inhibit tumour growth. The polynucleotide is used as a probe in mapping and tissue profiling. The encoded polypeptide and antibodies to the polypeptide can also be used for therapeutic and diagnostic purposes. The polynucleotide is useful for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid for producing a polypeptide, detecting differentially expressed. genes correlated with a cancerous state of a mammalian cell, and inhibiting tumor growth.

Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (SET) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisonse DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data obtained in electronic format directly from USPTO at sequence contains and the sequence contains and the sequence contains and the sequence contains and sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC transcription units that populate a genome. The library comprises several CC oligonuclectides, each capable of hybridising selectively to a set of CC messenger RNAs transcribed from a given transcription unit of the genome, CC which encodes one or more messenger RNA splice variants. The CC oligonuclectide libraries are useful for detecting mRNAs from a CC biological sample, in expression profiling studies, in qualitatively or GC quantitatively characterising the corresponding transcriptome, and in CC detecting RNA transcripts and splice variants of human or animal CC transcriptomes. The libraries may also be used as specialised mini CC libraries to detect transcripts of a sub-transcriptome under a particular CC biological or pathological state, and so allowing the detection of tissue CC and pathology-specific genes such as those genes only expressed in Secific tissue under a specific pathological condition; to detect RNA transcripts and splice CC variants of a transcriptome of a patient suffering from a particular CC developmental specific genes; and to detect RNA transcripts and splice CC variants of a transcriptome of a patient suffering from a particular CC disorder. ABN27253 to ABN59589 represent oligonucleotide sequences from CC part of the printed specification, but was obtained in electronic format CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           terminal amino-acid sequence of Cor a I. The DNA fragment produced was cloned into the pBluescript KS vector and transformed into E. coli XL1-Blue cells. The sequence allows mammals to be tested for allergic reactions to specific tree allergens. The derived polypeptide may be used to challange the mammal to elicit bronchial, conjunctival, dermal, nasal or oral provocation. The polypeptide may be used to treat a mammal or oral provocation. The polypeptide may be used to treat a mammal afflicted with a pollen allergy. It is administered in an amount sufficient to hyposensitise the mammal to Cor a I. See also AAQ22001-8 and AAQ21974. (Updated on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-2003 to correct DS field.)
The present invention describes a promoter (I) comprising DNA having any one of 21 1000-nucleotide long sequences (SI, see ADF45522), DNA having nucleotides in which one or more of nucleotides of (SI) is deleted, substituted or added and functions as disease stress-responsive promoter (DP), and DNA which hybridises with (SI) and functions as DP. Also described: (I) an expression vector (II) comprising (II); 2) a transformed organism (III) comprising (II); and (3) producing stress resistant plant by (III). (I) responds to disease stress, where the

The present sequence encodes a chitinase polypeptide. The specification describes glucosyl hydrolase family 19 chitinases (AAB18894, AAB18896, AAB18896, and AAB188902-05), and glucosyl hydrolase family 18 chitinases (AAB18895, AAB18897-98 and AAB18900-01). The level of chitinase in plar can be modulated to enhance disease resistance in crop plants and for control of pathogens. The chitinase polymucleotides are also useful as molecular markers for genotype in a plant, and for sequence shuffling

specification

plants

New maize chitinase genes encoding seven chitinases of glucosyl hydrolase family 19 are useful for enhancing disease resistance in crop plants by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            stress is caused by black sooty-mould microbe (Alternaria brassicicola) infection. (III) is useful for producing a transgenic plant. (I) is useful for producing a disease stress resistant plant and for elucidation the disease stress resistance response in plant. (I) enables the detection of stress caused by A. brassicicola infection. The present sequence represents an Arabidopsis thaliana disease stress-responsive promoter sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      08-FEB-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 맑
The invention relates to 63760 polypeptide (a human transporter family member, referred to as transporter-2 (TP-2)) and its corresponding nucleic acid. 63760 protein is useful for treating disorders characterised by insufficient or excessive production of a 63760 characterised by insufficient or excessive production of a 63760 compounds which modulate 63760 activity. 63760 DNA is used in gene therapy. 63760 protein, DNA and its antibody are useful for screening cassays, predictive medicine (e.g., diagnostic assays, prognostic assays, monitoring clinical trials, and pharmacogenetics); and methods of treatment (e.g., therapeutic and prophylactic). 63760 protein, DNA and its antibody are useful as a novel diagnostic target and therapeutic agent in assays applicable to treatment and diagnostic target and therapeutic agent in assays applicable to treatment and diagnosis of 63760 mediated or related disorders including central nervous system disorders such as atteriosclerosis, restenosis, myocardial infarction, etc; cancer by modulating cellular growth, differentiation or migration; hormonal disorders such as pituitary disorders (growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              hormonal disorder; pituitary; thyroid; hyperthyroidism; hypothyroidism; immune; transient hypogammaglobulinaemia; immunestimulator; anorectic; congenital X-linked infantile hypogammaglobulinaemia; sugar homeostasis; anorexia; neuroprotective; antiarteriosclerotic; cardiant; cytostatic; antidepressant; vasotropic; anticonvulsant; nootropic; metabolic;
                                                                                                                                                                                                                                                                                                                                                                                                  Novel human transporter 2 polypeptide referred as 63760 polypeptide which is a member of human transporter family, useful as reagents or targets for treating TP-2 mediated disorders such as senile dementia, depression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid comprising a cDNA encoding a human transporter protein, or its complement, a sequence that is 60 % identical to the CDNA, a fragment comprising at least 30 nucleotides of the cDNA, or a sequence encoding a fragment of the polypeptide comprising at least 10 contiguous amino acid residues of the cDNA. Also included are a vector comprising the novel nucleic acid molecule, producing the polypeptide, the isolated transporter polypeptide, an isolated antibody that specifically binds to the polypeptide, detecting the presence of the polypeptide or nucleic acid in a sample, a kit, identifying a compound that binds to, or that modulates the activity of, the polypeptide, and modulating the activity of the polypeptide. The nucleic acid is useful for preparing a composition for treating PGC-1 (not defined) associated disorders e.g. liver tumours, obesity, epilepsy or diabetes. The present sequence encodes a novel human reperior activity of diabetes.
The invention relates to identifying a stress condition to which a cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polymucleotides in the plant cell with array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polymucleotides in the plant cell characteristic of a stress response. The method is useful in the .
                                                                                                                                                                                                                                                                                                      24-AUG-2000; 2000US-0227866P

Katagiri
                                The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is
                                                                                                                                                                                                      Identifying at least pathogenic infection bacterial, fungal or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             not represented in the printed sinformation supplied to Derwent
                                                                                                                                                                   Claim
                                                                                                                                                                                           gene expression.
                                                                                                                                                                                                                                                                                                                                                 22-JUN-2001; 2001WO-IB001105

                                                                                                                                                                                                                                                                      synthetase (PAPSS) polynucleotide. A reduction of function pry-1 (axin) mutant in Caenorhabditis elegans was used to identify the T14G10.1 gene as a modifier of the AXIN pathway. Human orthologues, termed PAPSS, of this gene were then identified. These are attractive drug targets for the reatment of pathologies associated with a defective AXIN signalling pathway, such as cancer. In vitro and in vivo methods of assessing PAPSS function are provided. Modulation of the PAPSS or its binding partner can be used to examine the association of the PAPSS or its binding partner can be used to examine the association of the PAPSS another in mealthy and disease conditions and to develop diagnostic and therapeutic modalities for AXIN related pathologies. PAPSS-modulating agents that act by inhibiting or enhancing PAPSS expression, directly or indirectly, e.g. by affecting a PAPSS function such, can be identified using methods of the invention. Preferred modulating agents include antisense oligomers and phosphorothioate morpholino oligomers.

MI comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chang H,

An oligonucleotide (IV) that hybridises to (S1) can be used for CC detecting ovarian cancer in a patient's biological sample preferably cc serum or ovarian tissue. The method comprises contacting a biological sample from a patient with (IV), detecting the amount of polymucleotide (IV) and comparing the amount to a predetermined cutoff comparidising to (IV) and comparing the amount to a predetermined cutoff covalue and thereby desceting ovarian cancer in the patient, where the CC useful for stimulating and/or expanding T cells specific for an ovarian tumour protein comprising contacting T cells specific for an ovarian cutoff to isolate a full length gene from a suitable library e.g., a tumour cDNA cc library using well known techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC proteins (AAUIB214-AAUIB281), and cDNA and genomic sequences encoding for CC these proteins. DNA-binding proteins such as histones, chromo (chromatin CC organisation modifier) domain proteins, and y-box binding proteins may CC contribute to diseases resulting from aberrant DNA organisation and/or GC gene transcription. The sequences of the invention are useful in CC screening assays to identify antagonists and/or agonists that may enhance or block activities mediated by DNA-binding proteins. Blockers of DNA-binding proteins may be useful in treating discorders such as malignant CC binding proteins may be useful in treating discorders send as malignant CC diseases (e.g. cancer), autoimmune discorders (e.g. diabetes mellitus), CC rheumatic diseases (e.g. rheumatoid arthritis), genetic abnormalities (e.g. cystic fibrosis), infectious diseases (e.g. HIV) and neurological CC discorders (e.g. Alzheimer's disease). The polymucleotide sequences of the invention may also be used in gene therapy. AAS29030-AAS29157 represent CC DNA sequences encoding for novel DNA-binding proteins. Note: The Sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at figure the printed specification, but was obtained in electronic format directly from WIPO at figure the printed specification in the patent did not form part of the printed specification in the patent did not form part of the printed specification in the patent did not sequences of the sequence of the printed specification, but was obtained pot sequences of the printed specification in the patent did not form part of the printed specification in the patent did not sequences of the printed specification in the patent did not sequences of the printed specification in the patent did not sequences of the printed specification in the patent did not sequences of the printed sequences of the printed specification in the patent did not sequence to the printed specification in the printed specification i
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

The present invention relates to the isolation of novel DNA-binding proteins (AAU18194-AAU18281), and cDNA and genomic sequences encoding for these proteins. DNA-binding proteins such as histones, chromo (chromatin organisation modifier) domain proteins, and y-box binding proteins may contribute to disease resulting from aberrant DNA organisation and/or gene transcription. The sequences of the invention are useful in screening assays to identify antagonists and/or agonists that may enhance or block activities mediated by DNA-binding proteins. Blockers of DNA-binding proteins may be useful in treating disorders such as malignant diseases (e.g. cancer), autoimmune disorders (e.g. diabetes mellitus), rheumatic diseases (e.g. rheumatoid arthritis), genetic abnormalities (e.g. cystic fibrosis), infectious diseases (e.g. HIV) and neurological

                                                                                                                                                                immunodeficiencies (e.g. B cell immunodeficiencies, severe combined immunodeficiencies), autoimmune disorders (rheumatoid arthritis, multiple sclerosis, diabetes mellitus), allergic reactions and conditions (e.g. asthma), inflammatory conditions, graft-versus-host disease, blood-related disorders (thrombosis, atherosclerosis), hyperproliferative disorders (e.g. cancer), renal disorders (e.g. acute glomerulonephritis), cardiovascular disorders (e.g. arrhythmia), respiratory disorders (Goodpasture's syndrome), neurological disorders (e.g. Addison's disease), reproductive system disorders (e.g. endometriosis), infectious disease), reproductive system disorders (e.g. endometriosis), infectious
                                         useful to stimulate neuronal growth and treat, prevent, and/or diagnose neuronal damage which occurs in certain neuronal disorders or neuro-degenerative conditions. The present nucleic acid sequence encodes a human DNA-binding protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                     disease), reproductive system disorders (e.g. endometriosis), infectious diseases (e.g. viral, bacterial or fungal infections) and gastrointestinal disorders (e.g. Crohn's disease). The invention is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (ROSE/)

                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a new DNA-binding protein. The invention CC is useful in treating, preventing, diagnosing and/or prognosing CC immunodeficiencies (e.g. B cell immunodeficiencies) severe combined immunodeficiencies), autoimmune disorders (theumatoid arthritis, multiple CC sclerosis, diabetes mellitus), allergic reactions and conditions (e.g. CC asthma), inflammatory conditions, graft-versus-host disease, blood-related disorders (thrombosis, atherosclerosis), hyperproliferative conditions (e.g. cancer), renal disorders (e.g. acute glomerulonephritis), cardiovascular disorders (e.g. arrhythmia), respiratory disorders (c.g. ardiovascular disorders (e.g. arrhythmia), respiratory disorders (c.g. disease, Parkinson's disease), endocrine disorders (e.g. Alzheimer's CC disease, Parkinson's disease), endocrine disorders (e.g. Alzheimer's CC disease, reproductive system disorders (e.g. endometriosis), infectious CC disease, viral, bacterial or fungal infections) and CC disease (e.g. viral, bacterial or fungal infections) and CC disease (e.g. viral, bacterial or fungal infections) and CC disease (e.g. viral, bacterial or fungal infections and/or diagnose CC degenerative conditions. The present nucleic acid sequence encodes a continual protein of the invention. Note: The sequence encodes a continual protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was contained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastasized in a patient; (d) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) assessing the aggressiveness or indolence of prostate cancer in a patient; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker

Claim

1; Page 9711; 11750pp; English

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding the a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as superseed sequence tags (EST) for inforensics, in assessing biodiversities, or in identifying mutations

was ť

of.

New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA.

Claim 1; SEQ ID NO 10672; 44pp; English.

(I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate call carcinogenic potential of a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human;

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (II) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.

                                                                                                                                                                                                                                                                                The invention relates to 50 novel ESTs (expressed sequence tags; ACC60450 ACC60499) obtained from a rice leaf cDNA library. The invention also relates to a biochip comprising these ESTs. The biochip of the invention can be used in a variety of agricultural applications. It can be used in the cloning of genes which confer useful characteristics in crop species, to predict hybrid vigour (heterosis) at an early stage, in the detection of transgenic agricultural produce, in screening for novel herbicides and pesticides and in disease diagnosis. The biochip may also be used in medical research. The present sequence represents a rice leaf EST of the

                                                                                                                                                                  The invention relates to 50 novel ESTs (expressed sequence tags; ACF56894 -ACF56943) obtained from a rice leaf cDNA library. The invention also relates to a biochip comprising these ESTs. The biochip of the invention can be used in a variety of agricultural applications. It can be used in the cloning of genes which confer useful characteristics in crop species, to predict hybrid vigour (heterosis) at an early stage, in the detection of transgenic agricultural produce, in screening for novel herbicides and pesticides and in disease diagnosis. The biochip may also be used to assess the safety of transgenic agricultural products. The present sequence represents a rice leaf EST of the invention

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a
